Seamlessly Migrate Legacy ERP Data into Acumatica Cloud ERP

Data migration from a legacy ERP system to any new ERP system is a long, complicated process involving many risks and planned and unplanned expenses. Although data migration is rarely perceived as a difficult or time-consuming task, it can be one of the primary factors of failure for an ERP implementation.

Acumatica Services has created a data migration tool to simplify migrating legacy ERP data into Acumatica. This tool connects directly to the legacy ERP system, reducing time spent on exporting, cleansing, and importing data into Acumatica. The tool runs a validation process to determine the necessary data for correction before importing into Acumatica, thereby allowing data to be pulled into the system instantly. Customers frequently like to store years of historical legacy data within a single system.

Now there's an option to seamlessly import data stored in custom legacy tables without tedious and time-consuming data cleansing processes. It is even easier to access legacy data via Acumatica's custom generic inquires and smart panels.

Predefined Data Mappings

Fourteen predefined data mappings to the following Acumatica screens:

- GL Journal
- Customer, Customer Location, AR Invoice and Memo, AR Payments
- Vendor, Vendor Location, AP Bills and Adjustments
- Stock and Non-Stock Items, Inventory Receipts, Warehouses
- Sales Orders, Purchase Orders

Direct Sync Migration Options

- Excel
- Microsoft GP
- Sage 100

Powerful Data Migration Tool

- Parallel processing enabled
- Translation of legacy ID to new Acumatica key fields (COA, Subaccount, Customer, Vendor, Stock and Non-Stock SKUs, Warehouse)
- Find and replace
- Separate legacy tables
- Field validation and edit capabilities

KEY BENEFITS:

- Control data migration costs and reduce cost of entry
- Eliminate the need to configure data import scenarios by using preconfigured data maps
- Use Acumatica sooner with customer data, sales demos, proof of concepts, training, and go-live
- Save time and reduce manual touch points with direct links to other legacy ERP systems
- Create a single source of data and continue to get value from historical data by importing years of legacy data
